THRESHOLD Expands Parking Solutions with New Decals and Hang Tags for Vehicle Authorization

New parking products help schools, hospitals, corporate campuses, and residential communities quickly identify authorized vehicles at-a-glance.

Unionville, CT — April 29, 2026 THRESHOLD announced the expansion of its product line with the addition of **parking decals and parking hang tags**, designed to help organizations **identify which vehicles are authorized to be on the premises or in designated parking locations**. The new parking products support day-to-day parking control efforts by providing clear, visible identification that can be quickly verified by staff.

Across many environments, such as school campuses, healthcare facilities, corporate office complexes, and residential communities, parking availability is limited and access needs vary between staff, visitors, residents, students, vendors, and contractors. Parking decals and hang tags help organizations create a consistent, easy-to-manage system for distinguishing permitted vehicles and supporting compliance with posted parking rules.

Parking Decals

Parking decals are designed for windshield placement and are commonly used for longer-term authorization needs such as employee, resident, or student parking. The decal format provides a consistent, easy-to-check indicator that a vehicle is approved to park on-site or within assigned permit areas.

Parking Hang Tags

Parking hang tags display from the rearview mirror and are ideal for programs that require flexible or temporary authorization, including visitor permits, shared vehicles, vendor access, or time-limited parking permissions.

The new parking decals and hang tags are well-suited for organizations that manage multiple parking zones, designated lots, or permit-only areas, including:

- **School campuses** (K–12, colleges, and universities)
- **Hospitals and healthcare facilities**
- **Corporate campuses and office complexes**
- **Residential communities**, including apartment and condo complexes

These products are frequently managed by **security teams, facility managers, and property management staff**, providing a straightforward solution for identifying approved vehicles and supporting parking oversight.

Key Benefits

- **Quick, at-a-glance identification** of authorized vehicles
- Supports **parking compliance** in permit-only or assigned areas
- Helps reduce **unauthorized parking** across lots and zones
- Enables a **more organized, consistent parking program** across locations

"We're really excited to bring these products to our customers," said Suzanne Corcoran, General Manager at THRESHOLD. "Parking and vehicle identification are a natural extension of what we already do in visitor management. Our customers have been asking for it, and we're delivering with the same attention to quality and service they've always expected from us."

Parking decals and hang tags are available now through **THRESHOLD**. To request product details, ordering information, or to discuss the best fit for specific customer environments, contact **THRESHOLD at 800-243-1969**.

About THRESHOLD

THRESHOLD is a leading provider of visitor management solutions used in schools, hospitals, corporations, and institutions across the U.S. Known for its trusted visitor sign-in systems, and expiring badges, THRESHOLD helps organizations create safer environments while maintaining a professional and welcoming approach.

Founded in 1961 as Data Management, Inc., the company built a strong reputation for producing high-quality business forms and identification products. In 2019, it rebranded as THRESHOLD to reflect its focus on visitor management solutions that help organizations enhance security. In April 2023, THRESHOLD was acquired by Avery

Products Corporation, joining a family of trusted brands and gaining expanded resources to better serve customers across education, healthcare, corporate, and government sectors.
